

Job Title: Lead Mechanic

Location: Edison, NJ 08820

Department: Operations

About MetaBrand

MetaBrand isn't just a manufacturer — we're the **launchpad for the next generation of beverages**. We turn bold ideas into real drinks in real cans, from high-performance sports drinks and energy shots to THC / D9 & hemp-infused beverages and RTD cocktails. We partner with founders and emerging brands to go from "*what if?*" to "*what's next.*"

If you want to be close to the action—where new beverage brands are born and launched—this is where you'll do it.

The Role: Production Technician / Mechanic

We're looking for a well-rounded "generalist of all trades" to help install, maintain, and repair production equipment—and jump in with production support when needed. You'll work across mechanical, electrical, plumbing, refrigeration, and general facility projects to keep the plant running and growing.

This is a fantastic role for someone with technical school training, military experience, or broad maintenance skills who loves solving problems in a real, physical environment—not behind a desk.

What You'll Do

Equipment Maintenance & Installation

- Maintain, repair, and upgrade existing manufacturing equipment.
- Work on fillers, cappers, conveyor belts, depalletizers, and other production machinery.
- Create and follow preventative maintenance schedules to reduce downtime.
- Interface with equipment manufacturers and suppliers to acquire, inspect, and install new equipment and upgrades.

Mechanical, Electrical & Utility Work

- Install stainless steel piping, pumps, valves, tanks, and related process connections.
- Run and tie in electrical wiring (3P 460V, 3P 240V, 1P 240V, 1P 115V) to support equipment.
- Maintain low-pressure boiler systems, glycol cooling systems, rooftop refrigeration units, and fan condensers.
- Install and repair water lines, DWV PVC, and other facility utilities.

Facility Upkeep & Improvements

- Install and organize material racking and storage systems.
- Replace fluorescent lights with LED panels and support general facility upgrades.
- Help keep the entire facility functional, safe, and in good working order—"keep the place running and fix the stuff we seem to break daily."

Production Support

- Assist with production operations when needed to support the team and keep schedules on track.
- Be a hands-on presence on the floor, jumping in where needed to keep things moving.

Organization, Documentation & Communication

- Help organize tools, spare parts, supplies, manuals, and maintenance programs.
- Communicate clearly with supervisors and teammates about issues, progress, and project status.
- Work with limited supervision—often taking a rough sketch or whiteboard idea and turning it into a completed project.

Who You Are

- Hands-on problem solver – You like fixing things, building things, and figuring stuff out.
- Reliable & dependable – You show up, you follow through, and the team can count on you.
- "Can-do" mindset – Doesn't matter what the problem is—you're wired to get it done.
- Comfortable working with limited supervision—if someone draws it on a whiteboard, you can make it happen.
- Willing to get your hands dirty (don't worry, we have hand cleaner).

- Highly flexible—ready to shift between maintenance projects and production support as needed.

Highly Desirable:

- Bilingual (Spanish & English) is a plus
 - Graduate of a technical / trade school or relevant military experience.
 - Strong references from instructors, military supervisors, or prior employers.
 - Prior experience in beverage manufacturing or a similar production environment.
 - Highly organized with tools, parts, and documentation.
 - Self-confident but team-oriented—no egos, just ownership.
-

Why Join MetaBrand?

- Work at the heart of new beverage innovation—sports, energy, RTD cocktails, THC / D9, and more.
 - See the direct impact of your work as projects move from idea to real products in cans and bottles.
 - Join a nimble, collaborative team where good ideas move fast.
-
